

Project Executable Files

Date	15 July 2026
Team ID	SWTID-2026-2280
Project Name	EduGenie – AI-Powered Educational Assistant
Maximum Marks	3 Marks

Project Executable Files

This section requires submission of all executable and deployable files for the EduGenie project. All files are organized, named, and uploaded to the specified submission platform so the evaluator can run or deploy the solution using the provided files and instructions below.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / package.json / dependency file	Yes
4	Database schema / seed files (if applicable)	NA
5	Environment configuration file (.env.example or similar)	Yes
6	Deployed application URL (if hosted)	NA
7	APK / Executable binary (if applicable for mobile/desktop apps)	NA
8	Dockerfile / Containerization config (if applicable)	NA
9	Test files and test results	NA
10	Demo video or walkthrough (if required)	NA

Step 2: File / Folder Structure

The EduGenie project follows the folder structure below:

```
EduGenie/
├── backend/
│   ├── app/
│   │   ├── main.py           # FastAPI entry point
│   │   └── routes/
│   │       ├── qa.py         # Q&A endpoint
│   │       ├── quiz.py       # Quiz generation endpoint
│   │       ├── summarize.py  # Summarization endpoint
│   │       ├── learning_path.py # Learning path endpoint
│   │       └── flashcards.py  # Flashcard generation endpoint
│   └── services/
│       └── gemini_service.py # Gemini API connector
├── requirements.txt
├── .env                     # API key (not committed to Git)
├── frontend/
│   ├── index.html
│   └── script.js
├── .gitignore
└── README.md
```

Step 3: Deployment / Access Details

Hosted / Deployed URL	Not deployed publicly — run locally (see Step 4)
Login Credentials (Demo)	Not applicable — no authentication required
Platform / Hosting Provider	Local (Uvicorn) — not yet hosted
Repository Link	https://github.com/Himabindhu-123/EduGenie.git
Demo Video Link	TBD

Step 4: Run Instructions

Steps for the evaluator to run the EduGenie project locally:

- **1. Set up the backend:**

```
cd backend
python -m venv venv
venv\Scripts\activate
pip install -r requirements.txt
```
- **2. Add the Gemini API key:** create a .env file inside backend/ with:

```
GEMINI_API_KEY=your_api_key_here
```
- **3. Run the backend:**

```
uvicorn app.main:app --reload
```

The API will be running at <http://127.0.0.1:8000> (interactive docs at /docs).

- **4. Open the frontend:** simply open frontend/index.html in a browser — no build step required.

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	History and theme preference are stored only in the browser's localStorage.	History does not sync across devices or browsers; clearing browser data resets it.
2	No user authentication or multi-user support.	Planned as a future enhancement.
3	No persistent server-side database.	Not required for current feature set; would be added for multi-device history sync.
